

EPSILON

All-in-one, now also available for wider belts.
Light, fast and easy to program.

Lightweight press that can be used both in the workshop and on-site, even on large belt widths.

Its controllers allow the programming of a **stepped temperature**, generating two heating levels **to obtain an optimum result** even in thicker belt splices.

Fast water cooling minimizing the duration of each job.

Double airbag pressure system ensures even distribution over the entire splice surface.

Wi-Control presses can be programmed, process monitored and reports generated via cell phone.
